

Full Stack Development Course

Module-by-Module Curriculum

Every module maps directly to what companies are testing in technical interviews right now. No filler content. No outdated frameworks. No theory without application.

MERN Stack Track

MongoDB · Express.js · React.js · Node.js — 9 Modules

01 Web Development Fundamentals

Build semantic HTML5 structure, responsive CSS3 layouts using Flexbox and Grid, and real-world design principles every full stack developer is expected to know before their first interview.

[HTML5](#) · [CSS3](#) · [Flexbox](#) · [CSS Grid](#) · [Responsive Design](#) · [Semantic Structure](#) · [Web Accessibility](#)

02 JavaScript & ES6+

Master variables, functions, arrays, objects, DOM manipulation, ES6+ features, async/await, the Fetch API, and event-driven programming that powers every modern web application.

[JavaScript](#) · [ES6+](#) · [DOM Manipulation](#) · [Async/Await](#) · [Fetch API](#) · [Closures](#) · [Promises](#)

03 React.js Frontend Framework

React is the most hired frontend skill in India's full stack developer job market. Learn to build dynamic, component-based interfaces using React Hooks, Redux Toolkit, and third-party API integration.

[React.js](#) · [Hooks](#) · [useState/useEffect](#) · [Redux Toolkit](#) · [React Router](#) · [API Integration](#)

04 Node.js & Express.js Backend

Build production-grade server-side applications and REST APIs using Node.js and Express.js — with middleware, routing, JWT authentication, error handling, and server-side file management.

[Node.js](#) · [Express.js](#) · [REST APIs](#) · [Middleware](#) · [JWT Auth](#) · [Error Handling](#) · [File Handling](#)

05 MongoDB & Database Design

Work with MongoDB and Mongoose to design data models, execute CRUD operations, build aggregation pipelines, apply indexing, and connect your database to a live Node.js backend.

[MongoDB](#) · [Mongoose](#) · [CRUD Operations](#) · [Aggregation Pipeline](#) · [Data Modeling](#) · [Indexing](#)

06 Authentication, Security & APIs

Implement JWT authentication, OAuth2, bcrypt password hashing, and learn how to build and consume third-party APIs in a secure, production-ready way.

[JWT](#) · [OAuth2](#) · [bcrypt](#) · [API Security](#) · [CORS](#) · [Session Management](#)

07 Git & GitHub

Recruiters check your GitHub before they read your resume. Learn branching, merging, pull requests, and collaborative team workflows — and build a clean commit history that hiring managers notice.

[Git](#) · [GitHub](#) · [Branching](#) · [Pull Requests](#) · [Collaborative Workflows](#) · [CI/CD Basics](#)

08 Deployment & Cloud Hosting

Learn to deploy full stack applications on Vercel, Render, and Railway — with environment configuration, domain setup, SSL, and foundational DevOps concepts every full stack developer must understand.

[Vercel](#) · [Render](#) · [Railway](#) · [DevOps Basics](#) · [SSL](#) · [Cloud Hosting](#)

09 Capstone Projects, Internship & Portfolio

Build 2+ complete applications from scratch — an e-commerce platform, task management tool, or social application. Get access to a full stack developer internship for hands-on, real-world experience. Walk into every interview with deployed, live work on GitHub and verified internship experience.

[Live Projects](#) · [Full Stack Internship](#) · [Portfolio Building](#) · [GitHub Showcase](#) · [Interview Prep](#)

Java Full Stack Track

Core Java · Spring Boot · Hibernate · React.js — 10 Modules

01 Web Development Fundamentals

Build semantic HTML5 structure, responsive CSS3 layouts using Flexbox and Grid, and real-world design principles every full stack developer is expected to know before their first interview.

[HTML5](#) · [CSS3](#) · [Flexbox](#) · [CSS Grid](#) · [Responsive Design](#) · [Semantic Structure](#) · [Web Accessibility](#)

02 Core Java & OOP

Master Java fundamentals — data types, control flow, arrays, collections, and the object-oriented principles that every Java interview will test you on: classes, inheritance, polymorphism, abstraction, and encapsulation.

[Core Java](#) · [OOP](#) · [Collections Framework](#) · [Exception Handling](#) · [Generics](#) · [Java 8+ Features](#)

03 Advanced Java & Java 8+

Go deeper with Java 8+ features that modern enterprise applications depend on — Lambda expressions, Stream API, Functional Interfaces, Optional, and the Date/Time API that replaces legacy patterns.

[Lambda Expressions](#) · [Stream API](#) · [Functional Interfaces](#) · [Optional](#) · [Method References](#) · [Date/Time API](#)

04 Spring Boot Backend Framework

Spring Boot is the most hired backend skill in India's Java full stack job market. Learn to build production-grade REST APIs with Spring Boot, dependency injection, Spring MVC, and auto-configuration.

[Spring Boot](#) · [Spring MVC](#) · [REST APIs](#) · [Dependency Injection](#) · [Spring Annotations](#) · [Auto-Configuration](#)

05 Spring Data JPA & Database Design

Work with Spring Data JPA and Hibernate to design relational data models, execute CRUD operations, write custom queries, and connect your database to a live Spring Boot backend.

[Spring Data JPA](#) · [Hibernate](#) · [MySQL](#) · [CRUD Operations](#) · [JPQL](#) · [Entity Relationships](#) · [Database Design](#)

06 Authentication, Security & APIs

Implement JWT authentication, Spring Security, BCrypt password hashing, role-based access control, and learn how to build and consume third-party APIs in a secure, production-ready way.

[Spring Security](#) · [JWT](#) · [BCrypt](#) · [Role-Based Access](#) · [OAuth2](#) · [CORS](#) · [API Security](#)

07 React.js Frontend Integration

Java full stack developers are expected to build the complete picture. Learn React.js, component-based UI design, Hooks, Axios for API calls, and how to connect your React frontend to a Spring Boot backend.

[React.js](#) · [Hooks](#) · [useState/useEffect](#) · [Axios](#) · [REST Integration](#) · [React Router](#) · [Component Architecture](#)

08 Git, GitHub & DevOps Basics

Recruiters check your GitHub before they read your resume. Learn branching, merging, pull requests, and collaborative team workflows — and build a clean commit history that hiring managers notice.

[Git](#) · [GitHub](#) · [Branching](#) · [Pull Requests](#) · [Collaborative Workflows](#) · [Maven](#) · [CI/CD Basics](#)

09 Deployment & Cloud Hosting

Learn to deploy Java full stack applications on AWS, Railway, and Render — with environment configuration, domain setup, SSL, Docker basics, and foundational DevOps concepts every Java developer must understand.

[AWS EC2](#) · [Docker Basics](#) · [Railway](#) · [Render](#) · [DevOps Fundamentals](#) · [SSL](#) · [Cloud Hosting](#)

10 Capstone Projects, Internship & Portfolio

Build 2+ complete applications from scratch — a banking portal, inventory management system, or job board platform. Get access to a Java full stack internship for hands-on, real-world experience. Walk into every interview with deployed, live work on GitHub and verified internship experience.

[Live Projects](#) · [Full Stack Internship](#) · [Portfolio Building](#) · [GitHub Showcase](#) · [Interview Prep](#)

Technologies You Learn

Every tool in our full stack development course is chosen because companies in Rajkot, Gujarat, and across India are actively hiring for these skills right now.

Frontend	HTML5 · CSS3 · JavaScript ES6+ · React.js · Redux · Bootstrap · Tailwind CSS
Backend – MERN	Node.js · Express.js · REST APIs · JWT Authentication · Middleware
Backend – Java	Core Java · OOP · Spring Boot · Hibernate · JPA · Maven · Spring Security
Database	MongoDB · Mongoose · MySQL · phpMyAdmin
Tools & Deployment	Git · GitHub · Postman · Vercel · Render · Railway · npm · yarn
